

Town Manager's Update

May 25, 2023

Announcements

- Researchers from Dartmouth College are studying PFAS found in fish at 6 lakes across southern New Hampshire during the summer of 2023. This project is a collaboration with the NH DES and funded by the US Geological Survey. The goal of this project is to better understand the occurrence of PFAS in these lake ecosystems. The study will take place at Horseshoe Pond in Merrimack, along with 5 other lakes in the southern NH area.

If you catch a yellow perch, smallmouth bass or largemouth bass in Horseshoe Pond during the summer of 2023 these fish can be donated for the purpose of the study.

More details can be found on the Town website at www.merrimacknh.gov.

- Come and join Merrimack VFW Post 8641 on Memorial Day on Monday, May 29th. Parade kicks off at 10:30 am from the Rite Aid Parking Lot and travels down Daniel Webster Highway to Baboosic Lake Road and ends at the Last Rest Cemetery
